INTEGRATED LANDSCAPE CONSTRUCTION

CULTURE OF CRAFTMANSHIP ▸ BUILD TO LAST ▸ FOCUS ON RELATIONSHIPS

A well-built landscape is not a cosmetic upgrade — it is a long-term extension of your home.

DESIGNING AND BUILDING OUTDOOR ENVIRONMENTS THAT LAST

AN EMPOWERED, PROFESSIONAL TEAM

Frontiers Design Build Inc. is a construction management firm based in Guelph, Ontario, specializing in high-performance residential buildings and integrated landscape construction.

We design and build complex outdoor environments that seamlessly connect architecture, structure, and landscape — delivering projects that perform as well outdoors as your home does indoors.

RIGOR, SYSTEMS AND CRAFTMANSHIP

At Frontiers, landscape projects are led with the same rigor, systems, and craftsmanship as our custom homes and large-scale renovations.

Our team brings together landscape architecture, construction management, and building science to deliver cohesive projects that integrate pools, stonework, structures, and the home itself — without homeowners needing to coordinate multiple contractors.

Our work is grounded in:

- Integrated design and construction management
- Building-science-informed detailing
- Disciplined scheduling and cost control
- A culture of craftsmanship and accountability

This approach allows us to take on projects that exceed the capabilities of conventional landscape contractors.

INTEGRATED PROJECT DELIVERY

LANDSCAPES ARE NOT SIMPLE

Outdoor environments are harsh, dynamic, and unforgiving — especially in Southern Ontario.

Freeze–thaw cycles, soil movement, moisture, and material exposure place enormous stress on hardscape, structures, and finishes. When landscapes fail, it is most often due to:

- Inadequate upfront design
- Poor material selection
- Settlement and drainage issues
- Lack of integration with the home
- Insufficient construction oversight

While landscape projects may appear straightforward during the sales stage, the risks are typically hidden until years later — when repairs become disruptive and costly.

THE FRONTIERS PROCESS

Most homeowners are left quarterbacking complex projects — coordinating landscapers, pool companies, renovators, and specialty trades.

Frontiers offers a single, integrated team from pre-construction through completion.

We routinely manage projects that include:

- Pools and pool houses
- Stone patios, retaining walls, and water features
- Decks, shade structures, and outdoor kitchens
- Garages and accessory structures
- New openings, facades, rooflines, and porches
- Electrical, plumbing, and mechanical coordination

BUILDING SCIENCE APPLIED OUTDOORS

Our construction management systems allow us to sequence work properly, manage risk, and deliver predictable outcomes — without fragmentation or finger-pointing.

We apply the same principles that guide our high-performance homes to the landscape. This means:

- Designing for movement, drainage, and longevity
- Selecting materials based on performance, not trends
- Detailing assemblies to manage moisture and freeze–thaw stress
- Coordinating interfaces between building and landscape

Our goal is to protect the long-term value of your investment — not just deliver something that looks good on day one.

High-performance thinking isn't just for buildings. It's a safeguard for everything built to last.

WHO WE WORK BEST WITH

We work best with organizations that:

- Value upfront planning and disciplined execution
- Think in lifecycle terms, not short-term savings
- Appreciate transparent communication and collaboration
- Are committed to long-term performance and durability

We believe the strongest projects begin with early dialogue — before designs are finalized and before construction decisions are locked in.

If you're considering a significant landscape investment, we welcome the opportunity to help you plan it properly from the start.
